Summary

Computer Science undergraduate seeking **Software Engineering Intern** roles with strong foundations in backend development, distributed systems fundamentals, and scalable application development.

Education

- **K L University**, B - Tech in Computer Science and Engineering - GPA : 9.73
- **Vowel Junior College**, Intermediate in MPC - GPA -9.41

Skills

- **Programming & Core Engineering:** Java, C; strong foundation in Data Structures & Algorithms, OS, DBMS, OOPS.
- **Web & Backend Development:** HTML, CSS, JavaScript, React.js, Spring Boot;
- **Distributed Systems & Cloud:** Basic understanding of distributed systems, Docker, Kubernetes, AWS; CI/CD pipelines using Jenkins.
- **AI/ML:** PyTorch; deep learning basics, computer vision workflows, model evaluation.
- **Soft Skills:** problem-solving, teamwork, adaptability, ownership, and continuous learning.

Experience

- Applied strong **software engineering principles** including modular design, RESTful architecture, and clean code practices while building scalable systems, enhancing maintainability and reducing execution time by **25%**.
- Led effective **cross-functional collaboration** by integrating frontend, backend, and DevOps workflows, and automating deployments using **Jenkins and Docker**, reducing delivery time.

Projects

- **Vendor-Farmer Service Platform** – Developed and deployed scalable applications using **Spring Boot, Docker, AWS ECS, Application Load Balancer, ECR**. Worked on both monolithic and microservices architectures to support vendor services for farmers, enabling reliable deployments, efficient traffic handling, and scalable infrastructure capable of supporting **1000+ concurrent users**.
- **AI-based Smart Allocation Engine (SIH 2024)** – Built a **machine learning-based ranking system** using **Python, Spring Boot, MongoDB**. Focused on system design, implementation, and evaluation to improve allocation accuracy.
- **DRIVEAWAY – Car Rental Marketplace and Management System:** Developed scalable backend services using **Spring Boot** and **MongoDB**, integrated efficient caching with **Redis**, and implemented secure, role-based authentication using **JWT**. Designed microservices to optimize booking workflows and enhance system reliability, and established automated **CI/CD pipelines** for seamless deployment.

Certifications

- Amazon Web Services : Cloud Practitioner
- Salesforce AI Associate
