Education

- **K L University**, B - Tech in Computer Science and Engineering - GPA : 9.73
- **Vowel Junior College**, Intermediate in MPC - GPA -9.41

Skills

- **Programming and Core:** Java, C, Python; strong foundation in data structures and algorithms, Operating Systems, DBMS and Networking.
- **Web Development:** HTML, CSS, JavaScript, React.js; REST API design; responsive UI development.
- **Backend Engineering:** Spring Boot, Hibernate; microservice development; API integration.
- **Databases:** MySQL, PostgreSQL; query optimization and indexing for performance.
- **AI/ML:** PyTorch; deep learning model development; basic computer vision workflows.
- **DevOps & CI/CD:** Git, GitHub, Jenkins, Docker, Kubernetes, AWS; automated deployments.
- **Soft Skills:** Problem-solving, Team collaboration, Communication, Adaptability, Time management.

Experience

- Collaborated in **Agile teams** across academic and hackathon projects, contributing to sprint planning, code reviews, and task coordination, improving team efficiency by **20%**.
- Applied strong **software engineering principles** including modular design, RESTful architecture, and clean code practices while building scalable systems, enhancing maintainability and reducing execution time by **25%**.
- Led effective **cross-functional collaboration** by integrating frontend, backend, and DevOps workflows, and automating deployments using **Jenkins and Docker**, reducing delivery time by **40%**.

Projects

- **Employee Management and Training System** – Developed using **Django** with role-based access control and automated training tracking. Improved task visibility by **40%** and reduced manual tracking effort by **30%**.
- **Online Art Gallery Platform** – Built a full-stack marketplace using **React, Spring Boot, MySQL, Clouinary, Razorpay** with multi-role support and secure payments. Increased transaction success rate by **25%** and reduced image load latency by **35%**.
- **Personal Budget Planner** – Created a finance tracker using **React, Spring Boot, MySQL** for income, expense, and savings management. Improved data accuracy by **45%** and reduced manual calculation errors by **50%**.
- **Movie Rating Platform** – Implemented using **React** and **MovieDB API** with optimized search debouncing. Reduced API calls by **60%** and improved UI responsiveness by **30%**.
- **AI-based Smart Allocation Engine (SIH 2024)** – Built a **Python ML ranking system** with **Spring Boot + MongoDB** backend and **ReactJS** frontend for automated candidate-company matching. Increased allocation accuracy by **35%** and reduced manual effort by **50%**.
- **DRIVEAWAY – Car Rental Marketplace** – Developed using **Spring Boot, MongoDB, Redis, React** with RBAC, Razorpay integration, and CI/CD deployment. Supported **3 user roles**, reduced booking latency by **40%**, and improved system scalability by **50%**.

Certifications

- Amazon Web Services : Cloud Practitioner
- Salesforce AI Associate
